

Article Overview

The 10050 cable tray typically measures 100mm wide by 50mm high, designed for efficient cable management with robust ventilation and corrosion resistance.

Dimensions and Design

The 10050 cable tray has a width of 100mm and a height of 50mm, with lengths commonly around 3 meters per section . It is often available in wire mesh or perforated designs, allowing for optimal airflow around cables, which helps prevent heat buildup and ensures cooler operation . The open mesh design also facilitates easy visual inspection, cable additions, and modifications during system upgrades.

Material and Finish

These trays are typically made from high-quality steel with a zinc coating, providing excellent corrosion resistance and durability in industrial and commercial environments . The zinc coating protects against rust and environmental factors, making the tray suitable for long-term use in demanding conditions.

Applications

The 10050 cable tray is suitable for a wide range of applications, including:

- o Industrial plant wiring
- o Data center cable organization
- o Manufacturing facility electrical systems
- o Telecommunications installations
- o Commercial building infrastructure
- o Automation system wiring

Installation and Support

The lightweight yet sturdy design simplifies installation. Standard support systems and accessories can be used to mount the trays securely. The tray's design ensures balanced cable support, reducing installation time while maintaining organized cable routing .

Additional Considerations

- o The open mesh design allows for excellent ventilation, reducing the risk of overheating.
- o The tray can accommodate multiple cables while maintaining a compact profile.

Cable tray specification 10050

o It is compatible with standard cable tray accessories for bends, tees, and junctions, ensuring flexible system design . Overall, the 10050 cable tray is a versatile, durable, and efficient solution for managing electrical and data cables in various industrial and commercial settings .

In the electrical wiring of buildings, a cable tray system is used to support insulated electrical cables used for power distribution,
