Article Overview

You can connect a Nintendo Switch to a tablet using a capture card, screen mirroring apps, or Bluetooth, depending on whether you want to display gameplay, control the Switch, or communicate online.

Using a Capture Card for Display

To use your tablet as a display for your Switch, a capture card is the most reliable method:

- o Required items: HDMI cable, USB cable, capture card (e.g., Elgato HD60 S), and compatible capture software on your tablet .
- o Setup:
 - o Connect the HDMI cable from the Switch dock to the capture card.
 - o Connect the USB cable from the capture card to your tablet.
 - o Power on the Switch and open the capture software on your tablet.
- o Considerations: This method may introduce slight input lag and requires software compatible with your tablet's OS (Android or iPadOS), .

Using Screen Mirroring Apps (iPad or Android)

For iPads or tablets that support screen mirroring:

- o Ensure both the Switch (via dock/TV) and tablet are on the same Wi-Fi network .
- o Download a screen mirroring app like ApowerMirror or Reflector 4.
- o Connect an HDMI capture device to your TV and link it to the tablet through the app.
- o Start mirroring to display Switch gameplay on your tablet .

Using Bluetooth for Controller or Communication

Some tablets can connect to the Switch for voice chat or controller emulation:

- o Install the Nintendo Switch Online app on your tablet.
- o Enable Bluetooth on both devices.
- o Pair the Switch via the app by entering pairing mode under Controllers > Change Grip/Order.
- o Use the app for voice chat or limited controller functions .

Key Considerations

- o Compatibility: Not all tablets support direct HDMI input; check your device specifications .
- o Latency: Wireless or app-based methods may introduce delays, affecting fast-paced games .

How to connect a tablet to a switch device
