

How to seal cable trays and their prices

Article Overview

The cost of properly sealing cable trays typically ranges from \$2 to \$50 per meter for the tray itself, with additional sealing systems costing extra depending on the type and application.

Cable Tray Costs

The price of cable trays varies significantly based on material, type, size, and installation complexity. Common materials and their approximate costs per meter are:

- o Steel trays: \$5-\$25, durable and suitable for general-purpose installations .
- o Aluminum trays: \$6-\$30, lightweight and corrosion-resistant, ideal for outdoor or humid environments .
- o Fiberglass (FRP) trays: \$10-\$50, highly resistant to aggressive environments .
- o Stainless steel trays: higher-end, extremely durable and corrosion-resistant, used in heavy-duty or industrial applications . Tray type also affects cost: ladder trays are more expensive but handle heavy loads and heat well, perforated trays are mid-range, and wire mesh trays are lighter and cheaper to install . Labor and installation complexity can add significantly to the total cost, especially for large or high-elevation projects.

Sealing Systems for Cable Trays

Proper sealing ensures fire, water, and gas tightness for cable tray penetrations. Common systems include:

- o SLIPSIL Sealing Plugs: self-compressing, corrosion-resistant, suitable for single or multiple cables .
- o RISE(R) System: uses expanding rubber sleeves and sealant for fire, water, and gas protection .
- o NOFIRNO(R) Duct Seal System: provides watertight and gas-tight protection for ducts, manholes, and cable exits .
- o FIRSIO Firestops: modular system for multi-cable and tray penetrations in fire-rated walls and floors . The cost of these sealing systems depends on the number of penetrations, cable diameters, and environmental requirements. While exact prices vary, specialized sealing kits can range from \$50 to several hundred dollars per penetration, depending on complexity and certification requirements.

Total Cost Considerations

When budgeting for properly sealed cable trays, consider:

- o Tray material and type - affects both initial cost and long-term durability.
- o Sealing system selection - fire-rated, watertight, or gas-tight systems vary in price.
- o Labor and installation - sealing adds time and requires skilled personnel.
- o Accessories - supports, brackets, connectors, and fittings can increase costs . For a typical project, expect the combined cost of cable trays and sealing systems to range from \$10 to \$60 per meter, with higher-end
