

Article Overview

The cost of a Huawei optical module (C) typically ranges from \$50 to \$200 USD, depending on type, speed, and vendor.

Price Overview

Huawei optical modules, such as GPON OLT Class C+/C++ modules or SFP/SFP+ transceivers, vary in price based on several factors :

- o Module Type: GPON modules for fiber access are generally less expensive than high-speed SFP+ modules used in data centers.
- o Speed and Distance: Higher-speed modules (10G, 40G) and long-range single-mode modules cost more than 1G or multimode short-range modules .
- o Wavelength: Long-wavelength modules (1310 nm, 1550 nm) for long-distance communication are more expensive than short-wavelength modules (850 nm) for short-range use .
- o Brand and Authenticity: Original Huawei-certified modules carry a premium due to guaranteed compatibility and reliability, while generic or rebranded modules may be cheaper but risk compatibility issues .

Example Pricing

- o GPON OLT Class C+/C++ module: Prices from distributors in China typically start around \$50-\$100 USD per module .
- o Huawei SFP-10G-LR (10G, 10 km, 1310 nm): Retail prices are generally in the \$150-\$200 USD range, depending on distributor and shipping .

Additional Considerations

- o Warranty and Support: Original Huawei modules usually include a 1-year warranty and technical support .
 - o Vendor Selection: Authorized distributors or official Huawei resellers ensure authenticity and proper certification, which is important for network reliability .
 - o Bulk Orders: Purchasing multiple modules may reduce per-unit cost, especially for enterprise deployments.
- In summary, a Huawei optical module (C) can cost \$50-\$200 USD, with the exact price influenced by module type, speed, wavelength, and vendor. For precise pricing, contacting an authorized Huawei distributor or checking real-time listings is recommended .
