

Optical Module Sandblasting Machine

Larger units are available with two rotary blast heads. The heads can be oriented to perform separate functions, such as blasting the interior

Typical environments for manual blast cabinets include machine shops, custom fabrication, auto restoration, prototyping labs, education/training centers, and

Wings Logic Automatic Laser Sandblasting Machines represent a new generation of non-contact, digitally controlled glass surface treatment technology, engineered to deliver high-precision frosting,

SELECTIVE SAND-BLASTING With Scan& Blast(TM), operators can accurately mark areas for sandblasting--or exclusion--directly on the part, giving them more

Sandblasting is where a stream of abrasive material is blasted at high pressure against a surface to carry out the following methods: smooth a rough surface roughen a smooth surface shape a surface

Sandblasting + drilling + film removal three-in-one. 2. Glass, silver mirror, aluminum mirror, copper-free silver mirror, environmentally friendly mirror etc. can be

The mirror laser sandblasting machine is an advanced industrial device that integrates laser-guided sandblasting technology with fully automated systems to treat and finish mirror-like surfaces.

Sandblasting machine (robotic cell) for watchmaking parts, bulk parts detected by vision system, sandblasting on both sides, and palletizing into trays for degreasing.

The 4-in-1 1325 machine combines laser marking, mirror engraving, sandblasting, and drilling functions, offering precision and versatility for a wide range of materials.

With global voltage compatibility (110V/220V), in-house R& D and production, and CE/ISO certifications, our machines are designed for both performance and

Prices of Sand Blasting Machine, Advantages and Technical Specifications Sand blasting machine are designed to blast media like glass beads, aluminium oxide

ORBITAL BLASTING SYSTEM Automatic sandblasting systems for cylindrical, tubular and cast workpieces. The ORBITALBLAST is a semi to fully automatic sandblasting system designed for high

A large format laser glass sandblasting and drilling machine typically consists of the following components:

Optical Module Sandblasting Machine

Laser System: This includes a high-power laser source, beam delivery optics, and

Aviation - Sandblasting is used to clean and prepare parts such as engine components, turbine blades, and airframes before coating or painting, ensuring high-quality adhesion and uniform surfaces.

Wide range of sandblasting machines and sandblasting machines for surface treatment. See our models for more information.

A non-polluting automatic laser sand blasting machine, designed for glass and mirror processing, utilizes fiber laser technology for high precision and
